

PRESS RELEASE

Dec. 23, 2015

Reliable Controls® Internet Data Service (IDS)

Internet Data Service

Reliable Controls® launches Internet Data Service (IDS).

Victoria, B.C., Canada — Reliable Controls® has launched a new Internet Data Service (IDS) for RC-Toolkit® which enables users to configure MACH-Pro(Web)™ controllers to poll weather services over the internet and map retrieved values to BACnet® objects. These objects can then be trended, employed in operational sequences, and displayed in graphics and energy dashboards.

Mapping weather conditions and forecasts into Internet-enabled controllers is extremely helpful when preheating or pre-cooling commercial buildings or when adjusting the amount of free cooling available to a facility.

This modest yet significant service will provide yet another benefit to the 200 Reliable Controls Authorized Dealers and their customers who are saving energy in over 30 countries around the world.
