Reliable Controls releases RC-GrafxSet® 3.5

Victoria, BC, Canada – Reliable Controls is pleased to announce the release of RC-GrafxSet 3.5. RC-GrafxSet saves you time and money by allowing you to quickly and easily create custom graphical interfaces. Choose from thousands of professionally rendered images and animations across a broad spectrum of categories in the RC-GrafxSet libraries, drop them into your System Groups, and link them to objects or other System Groups to create interactive opening pages, navigation menus, dashboards, and more. Develop interactive HVAC, lighting, and security graphics. Build real-time integrated fault detection and diagnostic (IFDD) interfaces. Integrate analytics and charting components into your System Groups. Share your assets with others, and enjoy our Request Graphic service, through which we continuously add user-requested assets to the software.

RC-GrafxSet 3.5 includes the following:

• New HMI console folder simplifies the creation of EQUIPMENTviews, offering some common application-specific templates, and some preformatted background images.

• New graphical user interface improves navigation efficiency for the isometric 3D and conical 3D libraries, and the interface 2D functionality.

• Offers 1,709 net new assets; 406 graphical images, and 1,303 graphical animations since version 3.4.

• Newly updated documentation that includes the software manual, a how to use IFDD FlexTiles document, and submittal and catalog sheets.

• RC-GrafxSet Flash Utility enables the replacement of Flash animations with equivalent HTML5 animations via a mapping file.

RC-GrafxSet makes your graphical interfaces look great! Download and subscribe to RC-GrafxSet 3.5 today.
