Reliable Controls Introduces Operator Certification Training Program

Victoria, BC, Canada – Reliable Controls is pleased to announce the release of our new Operator Certification program, following successful completion of a month-long Beta test.

The main purpose of the new program is to help building operators learn how to get more value from their Reliable Controls MACH-System™ installations. Increasing an operator's technical knowledge will help them to increase occupant comfort, save energy, and reduce maintenance costs in buildings under their control.

The Operator Certification program consists of three components: an enrollment component, an online component, which includes multiple levels of short online videos capped off by

an advanced classroom course component. To complete online levels one through four, students simply view a series of videos, then complete a short online exam. After completing each level, students can print out a certificate to confirm their achievement. Level five is achieved by attending the Advanced Operator Training classroom course.
